Mi-PV

Excellence in Infection Control

Faith Microsolutions, an ISO 9001:2015 & ISO 13485:2016 certified company offers best in the class of infection prevention solution. The product range comprises of most advanced chemical formulations adapted to Indian conditions. All the products are manufactured at a state-of-the-art ISO 9001:2015 & ISO 13485:2016 GMP certified facility, using the highest grade raw-materials. We follow most stringent quality norms and all our products are tested at NABL accredited laboratories as per EN (European) standards both during and after production.

Mi-PV offers - Excellent antimicrobial activity, Good dermatological compatibility, Standard solution for pre & post operative scrub.

To prevent noso-comial infections the affected skin area must be disinfected before minor and major surgical procedures. Mi-PV [an aqueous PVP-Iodine preparation] is superior to other antiseptics for disinfecting wound and mucous membranes.

Hygienic Skin and mucous membrane disinfection -

Mi-PV is intended for application to the skin before injections, taking blood samples, punctures and minor surgery, Mi-PV is used undiluted paint. Mi-PV is used on to the skin areas to be disinfected until they are completely wet. Allow to take affect for one minute.

Pre-operative cleansing and disinfection-

Prepare the surgical site by washing with Mi-PV.

The surgical site must be disinfected at least twice with Mi-PV and allow to take effect for at least five minutes.

Post Operative wound treatment-

After the wound has been closed and incision foil removed, clean the sutures and surrounding skin area with Mi-PV. Depending on the type of dressing, cover the wound while the skin is still moist or if adhesion is necessary, after the skin has dried.

Hygienic Surgical and Hand disinfection-

Next to hand disinfection, skin antiseptis is most important measure for the prevention of infection. Its aim is to reduce the total skin flora as far as possible.
